Job Title: Software Engineer

Reports To: Sr. Director of Web Development

Department: Engineering

WellRight is a leading provider of corporate wellness software, used by organizations to improve the health and well-being of their employees and clients. Our mission is to help people change for good through positive habit formation focusing on six dimensions of holistic health: physical, emotional, financial, social, occupational, and purpose. WellRight's complete wellness program creates a habit-forming environment that empowers and engages employees with our highly configurable software platform that can be completely customized to meet the needs of any organization.

When you work at WellRight, you can expect a supportive and stimulating environment, where your successes are celebrated and you're always encouraged to learn, ask questions, share ideas, and grow. We practice what we preach, putting our team's wellness top of the list and helping them become their best selves.

Job Summary:
WellRight is seeking a Full Stack Software Engineer/Developer to work as a member of our highly talented development team and serve as a resource for best practices and technical leadership in front-end development. You will impact major features and new product decisions as part of our remarkably high performing, collaborative team of engineers who thrive on the business impact of their work. With strong team support and significant freedom and self-direction, you will experience the wealth of interesting and challenging problems.

Duties/Responsibilities:

- Work in a fast-paced environment to help generate ideas and quickly turn them into robust, well-tested, functioning code

- Work within a UI JavaScript framework (Angular) to produce exemplary code and deliver completed projects in the time promised
- Design, develop and deploy high-volume, scalable, enterprise-level, web-based applications using .Net Core/ .Net Framework / Node and AWS Serverless Services (Lambda, SQS, EventBridge, SNS, DynamoDB)
- Participate in system design, architecture decisions and code reviews
- Work in a highly interactive, team-oriented environment

Requirements
- 2-3+ years of hands-on programming
- Agile product development experience in high-growth tech companies
- Experience working with JavaScript Framework (Angular, React, Vue, Ember)
- C# using ASP.Net Core / .Net Framework 5+

Additionally, experience is preferred with the following systems/areas:
- Microservices, Message Queues and Caching Layers (Redis)
- AWS (EC2,SQS/SNS,Lambda,DynamoDB)
- Nrwl/NX MonoRepo experience is a big plus
- NoSQL Experience (DynamoDB)
- PostgresSQL (AWS Aurora)
- Strong unit testing skills (XUnit/Jest/Cypress)
- Git (AWS CodeCommit)

About WellRight:
